1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-25,34-43 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Zhang '733.

Zhang teaches an LCD with peripheral circuitry transistors having a higher degree of crystallinity than matrix transistors. The recitation "mono-domain structure" does not structurally distinguish over Zhang because the laser crystallization process results in channel regions with "mono-domain" structure. Note also that "mono-domain" in the claim here is relatively undefined and broadly does not structurally distinguish over Zhang which may be likewise labeled. There are no clear positive recitations in the claims which would structurally distinguish over Zhang.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kobori'490, Zhang '360, and Oikawa '351.
